CLIMATI

The case for 'hope punk' when talking about climate change: 'To be hopeless is to be uninformed'

PUBLISHED SUN, OCT 17 2021-8:21 AM EDT | UPDATED THU, OCT 21 2021-4:09 PM EDT

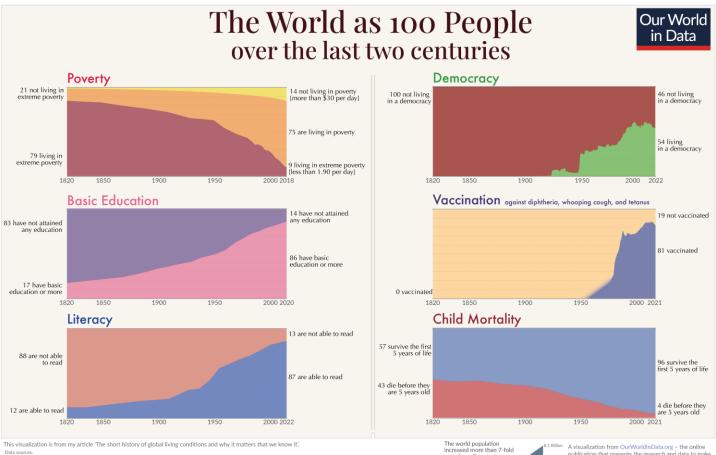

Imagine a sustainable future...

Over the past century humanity has seen an incredible increase in wealth and well being

Poverty: Michalis Moatsos (2021). [All measured in international-\$ to adjust for inflation and price differences between countries]

Education: Writgenstein Center (2023), World Bank (2023), van Zanden, J. et al. (2014). Literacy: Zanden, J. et al. (2014) and UNESCO

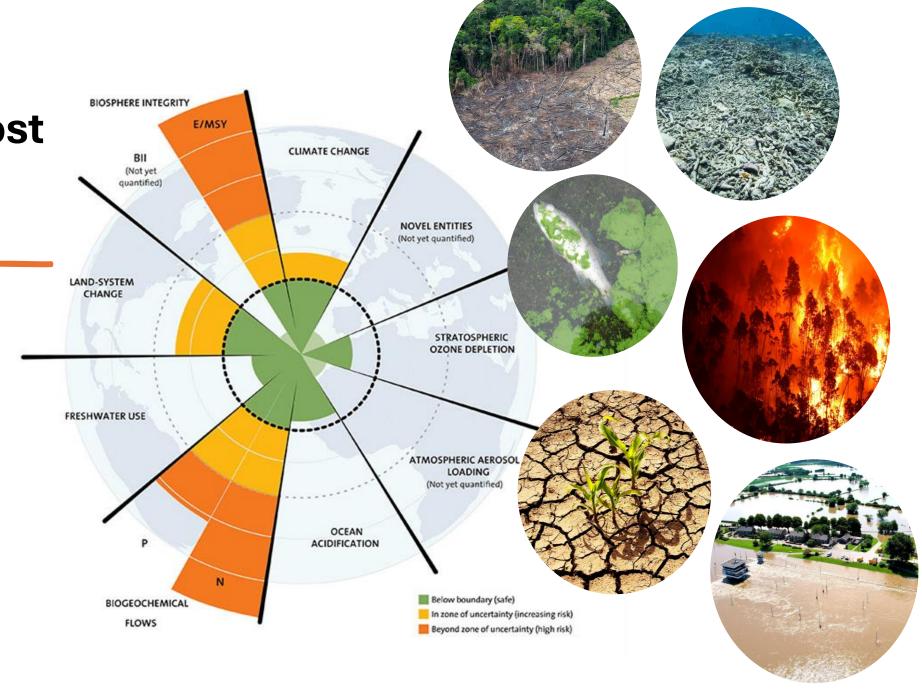

Democracy: regime classification by Skaaning et al. (own calcluation of global population share) Vaccination: WHO (Global data are available for 1980 to 2017 - the DPT3 vaccination was licenced in 1949 (Vaccination refers to children (ages 12-23 months) in each year and not the entire population) Child mortality: up to 1960 own caluclations based on Gapminder; UN-IGME thereafter

publication that presents the research and data to make progress against the world's largest problems

But this has come with a cost to the earth's well being

Most solutions for a sustainable and just city are at hand we just need to help scale them

This is why
Amsterdam aims to
create an economy
that works towards
more happy people
on a liveable planet

We call this the Donut City

Amsterdam has been working on the circular economy for over a decade

Amsterdam has been working on the circular economy

for over a decade

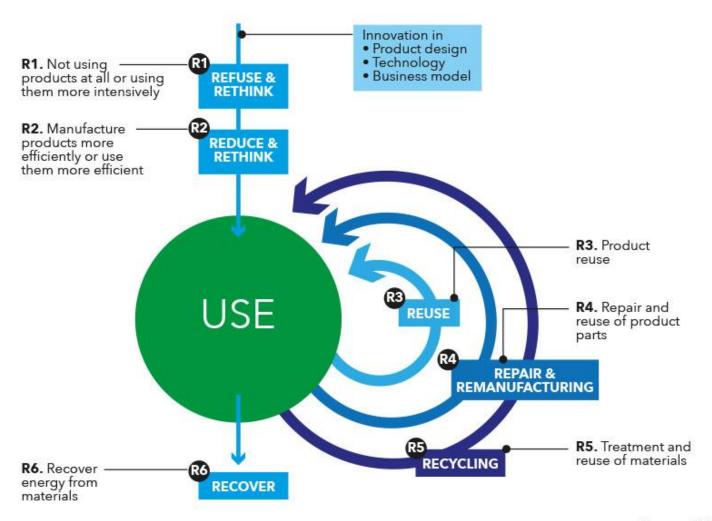

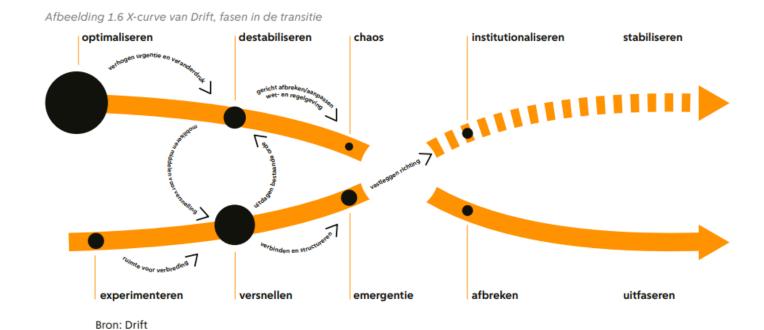

We focus on 4 key strategies in this transition

- Narrow the loop
- Slow the loop
- Close the loop
- Replace the material

R-LADDER WITH CIRCULARITY STRATEGIES

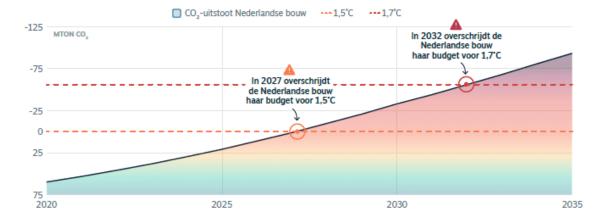

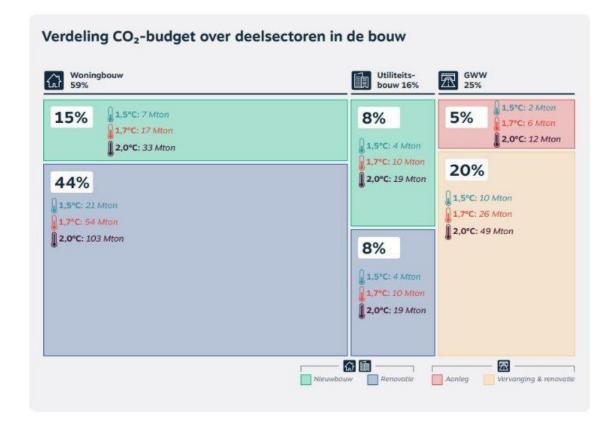

We use transition thinking to catalyze change

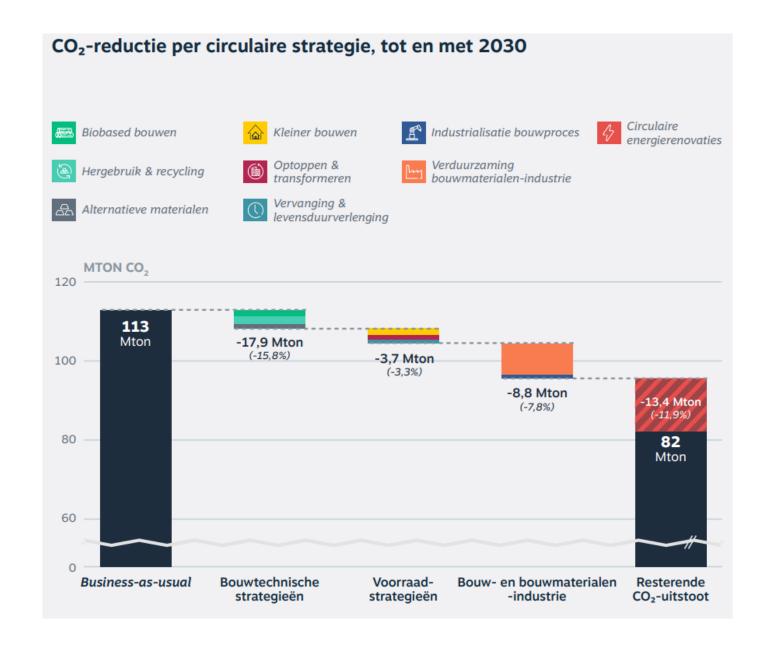

The City has a large role and responsibility for reducing the harm caused by the built environmentpart

And we know which interventions can help in reducing the impact

But what policy levers are there for a city to use?
